

INSTALLATION AND QUICK START

Motion to Transform

Adobe Premiere Pro UXP Plugin

Version 1.0.3

Requirements and installation

Host application

Adobe Premiere Pro 25.6.4 or later

Platforms

macOS or Windows, according to the current product listing

Product

Motion to Transform 1.0.3

Purchase source

Adobe Marketplace, Adobe Exchange, or aescripts

Install from your purchase source.

Adobe Marketplace or Exchange

If you installed Motion to Transform from Adobe Marketplace or Adobe Exchange, use Adobe's installation flow from the product listing, then restart Premiere Pro if it was open during installation.

aescripts installation workflow

- 1 Install and open the aescripts + aeplugins Manager App.
- 2 Sign in with the account used to purchase the product.
- 3 Locate **Motion to Transform** in your products.
- 4 Click **Install**.
- 5 Restart Premiere Pro if it was open during installation.

Open the plugin

- 1 Open Adobe Premiere Pro.
- 2 Choose **Window > UXP Plugins > Motion to Transform**.

Panel missing? Confirm Premiere Pro 25.6.4 or later is installed, restart Premiere Pro, and reinstall from the marketplace or installer you used for purchase.

Quick start

- 1 Open a sequence and select a video clip.
- 2 Open **Motion to Transform**.
- 3 Choose **Manual**, **All Magic**, or **All Magic Copy Only**.
- 4 In Manual mode, select the Motion properties to transfer and choose Copy or Copy + Remove for each processed property.
- 5 Optionally enable **Shutter 180°**.
- 6 Click **Apply**.
- 7 Review the **Report** panel for processing feedback.

Modes

Manual

Transfer only the Motion properties you choose. In Manual mode, each processed property can use Copy or Copy + Remove behavior.

All Magic

Copy selected Motion animation to Transform, then remove and reset the original processed Motion animation.

All Magic Copy Only

Copy animation to Transform without removing the original Motion animation.

Supported properties

- Position
- Scale
- Rotation
- Anchor Point
- Optional Transform shutter angle of 180°

Important behavior

- The Transform effect is added automatically when needed.
- Existing Transform keyframes for processed properties may be replaced.
- Copy + Remove removes original Motion keyframes and resets processed Motion properties.
- Save or duplicate important sequences before processing critical projects.

Recommended habit: Test the transfer on a duplicate sequence when working with important animation or an established finishing workflow.

Troubleshooting

Apply does not process a clip

- Make sure a video clip is selected.
- Make sure an active sequence is open.
- Review the Report panel for the processing result.

The panel is missing

- Confirm Premiere Pro 25.6.4 or later is installed.
- Restart Premiere Pro after installation.
- Reinstall from the marketplace or installer you used for purchase.
